LIKHITHA SAMALA

AI Engineer | GenAI | RAG | Multi-Agent Systems | Python

Hyderabad, India | +91 9182790602 | samalalikhitha8@gmail.com | linkedin.com/in/likhithasamala-aiengineer

PROFESSIONAL SUMMARY

AI Engineer with 3.9+ years of experience building and shipping production-grade Generative AI systems across legal, real estate, voice AI and automation domains. Proven track record designing multi-agent architectures, RAG pipelines and real-time Voice AI assistants, taking them from concept to live deployment with OpenAI, Claude and Gemini APIs, LangChain, FastAPI and n8n. Founder of Rayvoca, an AI voice agent platform, alongside hands-on delivery of enterprise-grade LLM solutions. Known for turning ambiguous business problems into reliable, autonomous AI products with measurable impact.

PROFESSIONAL EXPERIENCE

JasBells — Hyderabad, India

AI Engineer | *June 2026 – Present*

AI-Powered Video Translation & Dubbing Platform

- Built an AI pipeline that translates source videos (e.g., recorded in Telugu) into multiple target languages, including English, Tamil and others, through a single automated workflow.
- Engineered end-to-end AI dubbing to generate natural, language-accurate voiceovers for each translated version while preserving tone and delivery.
- Implemented AI-driven lip-sync technology to align facial movements with dubbed audio, producing natural-looking output across all translated language versions.
- Enabled creators to repurpose a single video into multiple regional and international language versions without manual re-recording or editing.

AI Voice Agent for Subscription Renewal

- Designed and deployed an AI agent to automate subscription-renewal workflows across multiple industry verticals.
- Built a voice-calling component to proactively engage customers for renewal reminders and retention conversations, reducing manual outreach effort.
- Architected the agent's conversation and renewal logic to adapt across diverse client use cases and industries.

BluJay Technologies Pvt Ltd — Hyderabad, India

AI Engineer | *April 2025 – May 2026*

AI Voice Assistant for Real Estate Lead Follow-Ups

- Architected and deployed an autonomous Voice AI assistant that runs outbound follow-up calls to real estate leads, qualifies prospects through context-aware LLM dialogue, and re-engages unresponsive leads within a 24-hour SLA window.
- Engineered a real-time conversational pipeline integrating Twilio telephony, Whisper speech-to-text and ElevenLabs text-to-speech, enabling natural two-way voice interaction over live phone calls.
- Integrated OpenAI and Claude APIs for dialogue management, applying prompt engineering and conversation-state handling so the assistant retains context across multi-turn calls and adapts responses to lead intent.
- Built a scalable FastAPI backend that orchestrates the full call lifecycle — call scheduling, retry logic for unanswered attempts and response tracking — exposed through REST APIs for downstream sales systems.
- Implemented structured CRM synchronisation via n8n workflows and REST integrations, writing back call outcomes, qualification status and lead metadata so the sales team works from a single source of truth.
- Developed lead-qualification logic over conversation outputs to separate high-intent prospects from leads requiring further nurturing, and to trigger automated re-engagement attempts.
- Built webhook-driven integrations between the FastAPI service and n8n automations so that call events and conversation outcomes trigger downstream sales workflows without manual intervention.
- Iterated on prompt templates and call-flow logic for real estate follow-up scenarios, refining the assistant's dialogue handling based on observed call outcomes in production.

- Automated repetitive tele-calling follow-ups end to end, reducing manual outreach effort and allowing the sales team to focus exclusively on high-intent qualified leads.

Welerix — Hyderabad, India

AI Engineer | *January 2023 – March 2025*

Advanced Legal AI Agent for Case Intelligence

- Designed and shipped a production-grade Legal AI Agent that enables lawyers to analyse thousands of historical case documents pre-trial, retrieve relevant precedents and generate contextual legal recommendations.
- Implemented Retrieval-Augmented Generation (RAG) pipelines with LangChain, ChromaDB and FAISS, tuning chunking strategies, hybrid retrieval and re-ranking to deliver high-precision semantic search across multi-document corpora.
- Developed a multi-agent orchestration framework in which specialised research, summarisation, citation and validation agents collaborate to produce explainable, source-backed case analyses.
- Engineered tool-calling and structured output parsing across agents to enforce schema-consistent, machine-readable responses suitable for consumption by downstream legal software.
- Exposed AI capabilities as FastAPI microservices with Pydantic validation, async processing and JWT-secured endpoints, enabling secure integration with existing legal platforms.
- Delivered 10+ production n8n automation workflows integrating CRMs, webhooks, Google Workspace and internal Python services, eliminating recurring manual operations.
- Engineered the document ingestion and embedding layer for large legal corpora, handling preprocessing and metadata so precedent retrieval stayed accurate across multi-document collections.
- Applied prompt engineering and structured output schemas to keep generated legal recommendations grounded in retrieved source documents and traceable back to their citations.
- Owned production-oriented AI workflows end to end, from document ingestion and embedding generation through retrieval, agent reasoning and API delivery.

Logistics Management System

- Built REST APIs with FastAPI for shipment tracking, driver management and delivery-status updates as part of the backend team.
- Designed PostgreSQL schemas and implemented CRUD endpoints with input validation for shipments, drivers and delivery records.
- Implemented authentication and role-based access control to secure platform operations across user roles.
- Optimised database queries and integrated backend APIs with the operations dashboard to improve data availability for operations teams.
- Validated and documented API endpoints with Postman during development and integration with the operations dashboard.
- Wrote unit tests and resolved defects to improve backend service stability, managing version control and code reviews with Git.

TECHNICAL SKILLS

AI / Generative AI: Generative AI, LLMs, Retrieval-Augmented Generation (RAG), AI Agents, Multi-Agent Systems, Prompt Engineering, NLP, Semantic Search

LLM Platforms & APIs: OpenAI APIs, Claude, Gemini

AI Frameworks & Libraries: LangChain, LangGraph, FastAPI, Flask, Pydantic, Pandas, NumPy, Requests, BeautifulSoup

Programming: Python, SQL, JavaScript, HTML5, CSS

Vector & Relational Databases: FAISS, ChromaDB, PostgreSQL, MySQL, MongoDB

Voice AI: Twilio (Telephony), Whisper (STT), ElevenLabs (TTS)

Automation & APIs: n8n, REST APIs, Webhooks, Workflow Automation, JSON, Postman

Tools & Platforms: Git, GitHub, Linux, VS Code, Cursor

PROJECTS

Rayvoca — Founder | *Python, STT, LLM, TTS, CRM Integration*

Founded Rayvoca, an AI voice agent platform built on a real-time STT–LLM–TTS pipeline integrated directly with CRM systems. The platform gives voice agents live customer context, updates records and triggers workflows mid-conversation, turning every call into an actionable business event. Leading end-to-end product and technical direction while building toward a scalable, enterprise-ready AI voice product.

- Architected the full STT–LLM–TTS pipeline from the ground up for real-time, low-latency conversational interactions.
- Built native CRM integrations so every call automatically updates customer records and triggers downstream workflows.
- Own the complete product vision — architecture, AI pipeline design, customer conversations and go-to-market direction — as founder.

Autonomous AI Recruitment & Interview Intelligence Platform | *Python, FastAPI, LangChain, Whisper, OpenAI API, PostgreSQL*

Developed an AI-powered recruitment intelligence platform automating resume screening, candidate evaluation and interview analysis through conversational AI agents and voice-based assessments. Integrated Whisper speech-to-text with LLM-based candidate scoring and skill-gap analysis, producing AI-generated hiring reports that streamline large-scale hiring decisions.

Automated Job Application & Cover Letter Agent | *Python, n8n, OpenAI API, LinkedIn, Gmail API*

Built an n8n-based automation agent that applies to 20+ relevant LinkedIn job postings daily, generating tailored LLM-written cover letters via the OpenAI API and auto-emailing the resume and cover letter to HR contacts through the Gmail API.

EDUCATION

Fortune School of Business — Bachelor of Computer Applications (BCA) | CGPA: 8.95 / 10
